

Robot Operating System

Dive into ROS

ROS demo_package

- Node
- Message
- Service

```
demo_pkg/  
├── include  
│   └── demo_pkg  
├── msg  
│   └── demo_msg.msg  
├── src  
│   ├── demo_message_listener.py  
│   ├── demo_message_talker.py  
│   ├── demo_publisher_node.py  
│   ├── demo_service_client.py  
│   ├── demo_service_server.py  
│   └── demo_subscriber_node.py  
├── srv  
│   └── demo_srv.srv  
├── CMakeLists.txt  
└── package.xml  
  
5 directories, 10 files
```

Creating a publisher node

Step 1:

Create node

Create executable **demo_publisher_node.py** file

Creating a publisher node

Step 2:

Import necessary modules

```
import rospy  
from std_msgs.msg import String
```

Creating a publisher node

Step 3:

Create a publisher function

```
def publisher_fun():  
    rospy.init_node('node_name')  
    pub = rospy.Publisher('topic_name', topic_data_class, queue_size)  
    message = 'some string'  
    rate = rospy.Rate(10)  
    rospy.loginfo('something')  
    while not rospy.is_shutdown():  
        pub.publish(message)  
        rate.sleep()
```

Creating a publisher node

Step 4:

Create final python module

```
if __name__ == '__main__':  
    publisher_fun()
```

Creating a subscriber node

Step 1:

Create node

Create executable **demo_subscriber_node.py** file

Creating a subscriber node

Step 2:

Import necessary modules

```
import rospy  
from std_msgs.msg import String
```

Creating a subscriber node

Step 3:

Create a subscriber function

```
def subscriber_fun():  
    rospy.init_node('node_name')  
    subs = rospy.Subscriber('topic_name', topic_data_class, callback)  
    rospy.spin()
```

Creating a subscriber node

Step 4:

Create a callback function

```
def callback_fun(msg):  
    Rospy.loginfo('Message received-->' + msg.data)
```

Creating a subscriber node

Step 5:

Create final python module

```
if __name__ == '__main__':  
    subscriber_fun()
```

Creating custom Message

Step 1:

Create msg/ directory in package folder

```
demo_pkg/  
├── include  
│   └── demo_pkg  
├── msg  
│   └── demo_msg.msg  
├── src  
│   ├── demo_message_listener.py  
│   ├── demo_message_talker.py  
│   ├── demo_publisher_node.py  
│   ├── demo_service_client.py  
│   ├── demo_service_server.py  
│   └── demo_subscriber_node.py  
├── srv  
│   └── demo_srv.srv  
├── CMakeLists.txt  
└── package.xml  
  
5 directories, 10 files
```

Creating custom Message

Step 2:

Create **demo_msg.msg** file

```
demo_pkg/  
├── include  
│   └── demo_pkg  
├── msg  
│   └── demo_msg.msg  
├── src  
│   ├── demo_message_listener.py  
│   ├── demo_message_talker.py  
│   ├── demo_publisher_node.py  
│   ├── demo_service_client.py  
│   ├── demo_service_server.py  
│   └── demo_subscriber_node.py  
├── srv  
│   └── demo_srv.srv  
├── CMakeLists.txt  
└── package.xml  
  
5 directories, 10 files
```

Creating custom Message

Step 3:

Specify message type and name in demo_msg.msg file

```
# msg type/msg name  
string greeting  
int32 number
```

Creating custom Message

Step 4:

Modify CMakeLists.txt and package.xml

CMakeLists.txt

package.xml

Creating custom Message

package.xml

Add these item at the end of package.xml file

package.xml

```
<build_depend>message_generation</build_depend>  
<exec_depend>message_runtime</exec_depend>
```

```
50 <!-- <doc_depend>doxygen</doc_depend> -->  
51 <buildtool_depend>catkin</buildtool_depend>  
52 <build_depend>roscpp</build_depend>  
53 <build_depend>rospy</build_depend>  
54 <build_depend>std_msgs</build_depend>  
55 <build_export_depend>roscpp</build_export_depend>  
56 <build_export_depend>rospy</build_export_depend>  
57 <build_export_depend>std_msgs</build_export_depend>  
58 <exec_depend>roscpp</exec_depend>  
59 <exec_depend>rospy</exec_depend>  
60 <exec_depend>std_msgs</exec_depend>  
61 <build_depend>message_generation</build_depend>  
62 <exec_depend>message_runtime</exec_depend>  
63  
64  
65 <!-- The export tag contains other, unspecified, tags -->  
66 <export>  
67   <!-- Other tools can request additional information be placed here -->  
68  
69 </export>  
70 </package>
```

Creating custom Message

CMakeLists.txt

- Add message_generation in find package section:

```
find_package(catkin REQUIRED COMPONENTS
  roscpp
  rospy
  std_msgs
  message_generation
)
```

- Uncomment the following line and add the custom message file:

```
add_message_files(
  FILES
  demo_msg.msg
  # Message2.msg
)

generate_messages(
  DEPENDENCIES
  std_msgs
)
```

```
$ cd ~/catkin_ws/
$ catkin_make
```

CMakeLists.txt

Creating custom Message

Check is the message is compiled correctly

```
(base) elnaz@Eli-Ubuntu:~$ rosmmsg show demo_pkg/demo_msg  
string greeting  
int32 number
```

Creating publisher using demo_msg

Step 1:

Create node

Create executable `demo_message_talker.py` file

Creating publisher using demo_msg

Step 2:

Import necessary modules

```
import rospy  
from demo_pckg.msg import demo_msg
```

Creating publisher using demo_msg

Step 3:

Creating send message function

```
def send_msg():  
    rospy.init_node('demo_message_talker')  
    greeting_msg = 'Hello ROS developer!'  
    pub = rospy.Publisher('greeting_number', demo_msg, queue_size=10)  
    rate = rospy.Rate(10)  
    my_msg = demo_msg()  
    while not rospy.is_shutdown():  
        my_msg.number = 2021  
        my_msg.greeting = greeting_msg  
        rospy.loginfo('Node is sending message...')  
        pub.publish(my_msg)  
        rate.sleep()
```

Creating publisher using demo_msg

Step 4:

Create final python module

```
if __name__ == '__main__':  
    send_msg()
```

Creating subscriber using demo_msg

Step 1:

Create node

Create executable `demo_message_listener.py` file

Creating subscriber using demo_msg

Step 2:

Import necessary modules

```
import rospy  
from demo_pckg.msg import demo_msg
```

Creating subscriber using demo_msg

Step 3:

Create a subscriber function

```
def listener():  
    rospy.init_node('demo_message_listener')  
    subs = rospy.Subscriber('greeting_number', demo_msg, callback=callback_fun)
```

Creating subscriber using demo_msg

Step 4:

Create a callback function

```
def callback_fun(msg):  
    number_msg = msg.number  
    greeting_msg = msg.greeting  
    rospy.loginfo(f'{greeting_msg} , the recieved number is : {number_msg}')
```

Creating subscriber using demo_msg

Step 5:

Create final python module

```
if __name__ == '__main__':  
    listener()
```

Creating custom Service

Step 1:

Create srv/ directory in package folder

```
demo_pkg/  
├── include  
│   └── demo_pkg  
├── msg  
│   └── demo_msg.msg  
├── src  
│   ├── demo_message_listener.py  
│   ├── demo_message_talker.py  
│   ├── demo_publisher_node.py  
│   ├── demo_service_client.py  
│   ├── demo_service_server.py  
│   └── demo_subscriber_node.py  
├── srv  
│   └── demo_srv.srv  
├── CMakeLists.txt  
└── package.xml  
  
5 directories, 10 files
```

Creating custom Service

Step 2:

Create **demo_srv.srv** file

```
demo_pkg/  
├── include  
│   └── demo_pkg  
├── msg  
│   └── demo_msg.msg  
├── src  
│   ├── demo_message_listener.py  
│   ├── demo_message_talker.py  
│   ├── demo_publisher_node.py  
│   ├── demo_service_client.py  
│   ├── demo_service_server.py  
│   └── demo_subscriber_node.py  
├── srv  
│   └── demo_srv.srv  
├── CMakeLists.txt  
└── package.xml  
  
5 directories, 10 files
```

Creating custom Service

Step 3:

Specify Request and Response message type and name in demo_srv.srv file

```
# Request msg type
string in_name
---
# Response msg type
string out_greeting
```

Creating custom Service

Step 4:

Modify CMakeLists.txt and package.xml

CMakeLists.txt

package.xml

Creating custom Service

package.xml

Add these item at the end of package.xml file

package.xml

```
<build_depend>message_generation</build_depend>  
<exec_depend>message_runtime</exec_depend>
```

```
50 <!-- <doc_depend>doxygen</doc_depend> -->  
51 <buildtool_depend>catkin</buildtool_depend>  
52 <build_depend>roscpp</build_depend>  
53 <build_depend>rospy</build_depend>  
54 <build_depend>std_msgs</build_depend>  
55 <build_export_depend>roscpp</build_export_depend>  
56 <build_export_depend>rospy</build_export_depend>  
57 <build_export_depend>std_msgs</build_export_depend>  
58 <exec_depend>roscpp</exec_depend>  
59 <exec_depend>rospy</exec_depend>  
60 <exec_depend>std_msgs</exec_depend>  
61 <build_depend>message_generation</build_depend>  
62 <exec_depend>message_runtime</exec_depend>  
63  
64  
65 <!-- The export tag contains other, unspecified, tags -->  
66 <export>  
67   <!-- Other tools can request additional information be placed here -->  
68  
69 </export>  
70 </package>
```

Creating custom Service

CMakeLists.txt

- Add message_runtime in catkin_package() :

```
CATKIN_DEPENDS roscpp rospy std_msgs
message_runtime
# DEPENDS system_lib
)
```

CMakeLists.txt

- Uncomment the following line and add the custom service file:

```
add_service_files(
  FILES
  demo_srv.srv
#  Service2.srv
)
```

```
$ cd ~/catkin_ws/
$ catkin_make
```

Creating custom Service

Check is the service is compiled correctly

```
(base) elnaz@Eli-Ubuntu:~$ rossrv show demo_pkg/demo_srv
string in_name
---
string out_greeting
```

Creating demo_srv Server

Step 1:

Create node

Create executable `demo_service_server.py` file

Creating demo_srv Server

Step 2:

Import necessary modules

```
import rospy  
from demo_pckg.srv import demo_srv
```

Creating demo_srv Server

Step 3:

Creating server function

```
def say_hello_server():  
    rospy.init_node("demo_service_server")  
    server = rospy.Service('greeting_service', demo_srv, handler=say_hello)  
    print("Server is ready to say greeting :)")  
    rospy.spin()
```

Creating demo_srv Server

Step 4:

Create handler function

```
def say_hello(req):  
    resp = 'Hello dear ' + req.in_name + '  
    print(resp)  
    return (resp)
```

Creating demo_srv Server

Step 5:

Create final python module

```
if __name__ == '__main__':  
    say_hello_server()
```

Creating demo_srv Client

Step 1:

Create node

Create executable `demo_service_client.py` file

Creating demo_srv Client

Step 2:

Import necessary modules

```
import rospy
import sys
from demo_pckg.srv import demo_srv
```

Creating demo_srv Client

Step 3:

Creating send request function

```
def send_name(in_name):  
    rospy.wait_for_service('greeting_service')  
    client_greeting = rospy.ServiceProxy('greeting_service', demo_srv)  
    response = client_greeting(in_name)  
    print(f"Server responded ---> {response.out_greeting}")
```

Creating demo_srv Client

Step 5:

Create final python module and define input

```
if __name__ == "__main__":  
    in_name = str(sys.argv[1])  
    send_name(in_name)
```
